

I noticed something recently and need everyones help

Posted: 2025-10-13 15:51:44.329259

For a while now, at least a few weeks, my wifi connection would slow for a bit and then get back up. I always gave it an excuse you know like it happen. But, I noticed now, it happens no matter the wifi connection I connect to, it is still slow even when I connect. It is slow no matter the location and it is also slow on my phones 5G! My laptop, which would be connected to an actual router modem, would be slow at the exact same time and in the exact same way of my Iphones connected to 5G!

They slow at the same time in the same way and stop in the same way and no one else around me ever has these issues.

I believe I am being tapped and they are offloading information from my devices every once in a while.
